EDUCATION

University of Zurich   Zurich
Bachelor of Science in Business Informatics, Minor: Banking and Finance   *Sep 2022 – Jan 2026*

Highschool Limmattal   Zurich
Swiss Matura; specialization in PAM – Physics and Applied Mathematics   *Sep 2016 – Aug 2022*

EXPERIENCE

Julius Baer   Zurich
Robotic Process Automation Developer Intern   *Jun 2025 – Sep 2025*

- **Overview**: Automated banking business processes using UiPath by designing, developing, and deploying bots to increase efficiency and reduce manual workload. Gained hands-on experience with UiPath Orchestrator, libraries, and workflow design, as well as C#, VB.NET, and Regex for custom automation solutions.
- **Global DateTime Library**: Developed a reusable UiPath library with multiple date time activities, widely used across Swiss and Singapore teams; reduced repetitive development effort and improved bot reliability, saving an estimated **80+ developer hours annually.**
- **Integration in Trade Bot**: Integrated the DateTime library into a trade automation bot that processes trade lists, identifies the next possible execution date, and performs transactions through the bank's system; increased automation accuracy and efficiency, reducing manual intervention and saving several hundred trade-hours per year.
- **Migration and Login Bot**: Built a UiPath bot that automated the migration of 113 RPA processes to Windows 11, handling login, data retrieval and execution in VDI environments, resulting in an **80% faster and more efficient workflow** compared to manual planning and execution, while saving over **60 developer hours annually.**
- **Business Analysis**: Refactored three active RPA bots by analyzing banking processes, identifying automation opportunities, and documenting workflows to ensure compliance and improve operational efficiency.

Stewards   Zurich
Event Security / Team Lead   *Jan 2024 - Present*

- **Leading**: Coordinated security teams and supervised event operations.
- **Documentation**: Implemented safety protocols, emergency procedures and trained staff on security measures.
- **Safety**: Ensured general safety and security of premises and personnel.

PROJECTS

- **Web App Game**:
  - **Liar's Dice**: Developed a full-stack multiplayer dice game: frontend with React and backend with Spring Boot (Java). Implemented turn-based logic with WebSocket communication, real-time voice chat via Agora API, and persistent player statistics with JPA. Applied Scrum methodology for agile development and iterative feature improvements. Deployed using Gradle and Google Cloud; ensured reliability with RESTful services and unit testing via Mockito.

TECHNICAL SKILLS

- **Languages**: Python, C++, SQL, JavaScript, Java, VB.NET, HTML, CSS
- **Libraries/Frameworks**: React, Spring Boot, NumPy
- **Developer Tools**: UiPath, Workflows, Regex

RELEVANT COURSEWORK

- **Computer Science**: Database Systems, Software Engineering, Artificial Intelligence, Blockchain Technology
- **Finance Business**: Corporate Finance, Asset Management, Auditing, Financial Accounting, Business Informatics
- **Interests**: Bridging data, software, and business processes to build scalable, human-centric systems
