EDUCATION

- **University of Zurich** Zurich
Bachelor of Science in Business Informatics, Minor: Banking and Finance Sep 2022 – Jan 2026
- **Highschool Limmattal** Zurich
Swiss Matura; specialization in PAM – Physics and Applied Mathematics Sep 2016 – Aug 2022

EXPERIENCE

- **Julius Baer** Zurich
Robotic Process Automation Developer Intern Jun 2025 – Sep 2025
 - **Overview:** Collaborated in a team to automate banking business processes using **UiPath** by designing, developing, and deploying bots to increase efficiency and reduce manual workload. Gained hands-on experience with UiPath Orchestrator, libraries, workflow design, as well as **C#, VB.NET**, and **Regex** for custom automation solutions.
 - **Global DateTime Library:** Developed a reusable UiPath library with multiple date time activities, widely used across Swiss and Singapore teams; reduced repetitive development effort and improved bot reliability, saving an estimated **80+ developer hours annually**.
 - **Integration in Trade Bot:** Integrated the DateTime library into a trade automation bot that processes trade lists, identifies the next possible execution date, and performs transactions through the bank's system; increased automation accuracy and efficiency, reducing manual intervention and saving several hundred trade-hours per year.
 - **Migration and Login Bot:** Built a UiPath bot that automated the migration of **113 RPA** processes to Windows 11, handling login, data retrieval and execution in VDI environments, resulting in an **80% faster and more efficient workflow** compared to manual planning and execution, while saving over **60 developer hours annually**.
 - **Business Analysis:** Refactored three active RPA bots by analyzing banking processes, identifying automation opportunities, and documenting workflows to ensure compliance and improve operational efficiency.
- **Stewards** Zurich
Event Security / Team Lead Jan 2024 - Present
 - **Leading:** Coordinated security teams and supervised event operations.
 - **Documentation:** Implemented safety protocols, emergency procedures and trained staff on security measures.
 - **Safety:** Ensured general safety and security of premises and personnel.

PROJECTS

- **Portfolio Website** <https://jamin-sulic.vercel.app/>:
 - **Description:** Developed a personal portfolio website to showcase my skills and projects. The website is built using **Next.js** for optimal performance and it has been deployed on **Vercel** for seamless hosting and easy management.
- **StockVision:**
 - **Description:** Developed a stock price prediction web app using machine learning models for both price forecasting and trend classification. The app uses an **LSTM** built with **TensorFlow** to predict future stock prices based on historical data, while an **XGBoost model** is used for trend classification (Buy/Sell) based on technical indicators. The **Frontend** was built with **Next.js**, **JavaScript**, and **React**, while the **Backend** was implemented using **Python** with **FastAPI**. The **Data Analysis** was conducted using **Jupyter Notebook** with **Pandas**, and the data is stored in a **SQL database** on **Supabase**. Users can input stock tickers and receive real-time predictions.
- **Liar's Dice:**
 - **Description:** Developed a **full-stack** multiplayer dice game: frontend with **React** and backend with **Spring Boot**. Implemented turn-based logic with **WebSocket** communication and real-time voice chat via **Agora API**. Deployed using **Gradle** and **Google Cloud**; ensured reliability with **RESTful** services and unit testing via **Mockito**.

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, JavaScript, C#, SQL
- **Frameworks & Libraries:** Spring Boot, React, Next.js, TensorFlow, NumPy, Pandas
- **Backend & Architecture:** REST APIs, Machine Learning Pipelines, CI/CD
- **Databases:** PostgreSQL, MongoDB, Supabase
- **Tools & Platforms:** Git, GitHub Actions, Docker, AWS, Google Cloud, UiPath, Vercel

RELEVANT COURSEWORK

- **Computer Science:** Software Engineering, Database Systems, Artificial Intelligence, Machine Learning, Blockchain Technology
- **Finance & Business:** Corporate Finance, Asset Management, Auditing, Financial Accounting, Business Informatics
- **Interests:** Bridging data, software, and business processes to build scalable, human-centric systems
